

WebUI application

App for Indoor Lighting Management

Simple and easy control

WebUI is the simplest application for intelligent lighting control in indoor applications. First you configure individual groups of luminaires, assign them the required parameters (intensity level ...) and just manage your luminaires with one click.

Control from various devices

Control your lighting from your smartphone, tablet or central dashboard in your computer.

Tailor-made application to your needs

We will adjust the application to your requirements. It goes without saying that we will create custom configuration menu, background, logo, language, menu color or map of lighting group.

Use in various indoor application

Control luminaires not only in production halls, shops, stores, but also various sport facilities. [Four soccer fields in Ewijk](#), Tennisclub Vinray, concert hall STADSAAL in Mank or basketball hall Iskra in Svít saving energy thanks to our smart lighting control application.
